Note that all the answers should be written on the answer sheet.

1. Fill in the following blanks with the correct numbers.
(1) When $a>0$, then what is the range of $x$ that satisfies the following inequality:

$$
a x^{2}-3 a x+2 a<0
$$

(1) $<x<$ (2).
(2) If $4^{3 x-1}-2^{5 x-4}=0$, then $x=$ $\square$ .
(3) $10^{\log _{10} 5}=$ $\qquad$ .
(4) When $\alpha$ and $\beta$ are the solutions of the quadratic equation $x^{2}-5 x+3=0$, then $\alpha^{2}+\beta^{2}=(1),(\alpha-\beta)^{2}=\square$ (2).
(5) When $|\vec{a}|=1,|\vec{b}|=2,|\vec{a}-\vec{b}|=\sqrt{7}$, then the degree measure of the angle between $\vec{a}$ and $\vec{b}$ is $\qquad$。
(6) When $\triangle \mathrm{ABC}$ is a triangle where $\angle \mathrm{A}=30^{\circ}$, then $\sin (\angle \mathrm{B}+\angle \mathrm{C})$ is $\square$ .
(7) How many multiples of 3 are there among integers from 100 to 200 ? The answer is (1) and the sum of those multiples of 3 is (2)
(8) When $x^{3}+a x^{2}+b x+5$ is divisible by $x-1$ and has a remainder of 5 when divided by $x-2$, then $a=$ (1),$b=\square$ (2).
(9) Let $f(x)=\left|x^{2}-1\right|$. Then $f(0)=\square$ (1) $\int_{0}^{2} f(x) d x=\square$ (2).
(10) Assume that $a, b$ and $c$ are consecutive terms of arithmetic progression $(a<b<c)$. If $a+b+c=24$ and $a b c=440$, then $a=(1), b=(2), c=\square$ (3).
2. On the plane $x y$, there are four points ; $\mathrm{O}(0,0), \mathrm{A}(0,3), \mathrm{B}(0,-3), \mathrm{C}(4,0)$. Fill in the following blanks with the correct numbers.
(1) The equation of the straight line AC is (1) $x+\square$ (2) $y-(3)=0$
(2) The coordinates of the circumcenter of $\triangle \mathrm{ABC}$ are $\left(\frac{\boxed{\square}}{8}, \square\right)$.
(3) When point D is the intersection of bisector of $\angle \mathrm{ABC}$ and $x$-axis, then $\mathrm{OD}: \mathrm{DC}=(1):(2)$ and the coordinates of the inner center of $\triangle \mathrm{ABC}$ are $\left(\frac{\boxed{(3)}}{2},(4)\right.$.
3. The line ( $a$ ) ; $y=x+k$ ( $k$ is a constant) is tangent to both the parabola (b); $y=x^{2}-5 x+7$ and the parabola (c); $y=x^{2}+3 x-1$.
Point P is the point of tangency of the line $(a)$ and the parabola $(b)$, point Q is the point of tangency of the line (a) and the parabola (c) and point R is the intersection of the parabola (b) and the parabola (c).

Fill in the following blanks with the correct numbers.
(1) The constant $k=$ $\qquad$
(2) The $x$-coordinate of the point $P$ is (1), the $x$-coordinate of the point $Q$ is $\square$ (2) and the $x$-coordinate of the point R is $\qquad$ (3)
(3) The area surrounded by the line (a), the parabola (b) and the parabola (c) is
$\square$
(c)
(b)
